

Filtration elements – type SWG

Type SWG (water-glycol) is designed for filtration and treatment of water-glycol based industrial liquids. The WG filter element is made completely of polypropylene (PP). The filter element removes solid particles from a size of **10µm**. The filter element is designed to remove solid particles to purity class **NAS1638 8-9, ISO4406 19/17/14**. The **SWG** filter element is designed for the treatment of industrial fluids in low pressure systems.
