

Filtration elements – type FUEL

The **FUEL** type is specially designed for the filtration and treatment of diesel-based fuels with an emphasis on the removal of particulates and water. The filter element removes and traps water and solid particles from 5µm in size. The filter element is designed to remove solid particles to **NAS1638** cleanliness class **7**, **ISO4406 18/16/13**.

Type		FUEL351	FUEL201
Material		Cellulose	Cellulose
Diameter	mm	190	143
High	mm	114	114
Fineness of filtration	µm (absolute)	≥ 5	≥ 5
Flow rate	l/min.	3,5	2
Filtration capacity	NAS	7-8	7-8
β ratio	β 5µm	> 120	> 120
