

Filter elements type HH

Type HH is designed for super fine filtration and treatment of oils with an emphasis on the removal of soft sludge, deposits, varnish, resins and particulates. The filter cartridge removes and traps solid particles from **1µm** in size. The filter cartridge is specially designed to remove soft sludges, deposits and resins up to **MPC ΔE ≥ 1** and purity class **NAS1638 3, ISO4406 14/12/9**. The HH filter cartridge is designed for the treatment of oils in servo valve systems and sensitive laboratory instrumentation.

Type		HH351	HH301	HH201	HH101
Material		Cellulose	Cellulose	Cellulose	Cellulose
Diameter	mm	190	179	143	104
High	mm	114	114	114	114
Fineness of filtration	µm (absolute)	≥1	≥1	≥1	≥1
Flow rate	l/min.	3,5	3	2	1,5
Filtration capacity	NAS	2-3	2-3	2-3	2-3
β ratio	β _{1µm}	> 200	> 200	> 200	> 250
