

Filtration elements – typ T051 H051

Type T051 and H051 are designed for low volume oil filling. Type T051 and H051 are designed for the gentle filtration and treatment of oils with emphasis on the removal of soft sludge, varnish, resin and particles. The filter element removes and traps water and solid particles from **3µm** and **5µm** in size. The filter element is specifically designed to remove solid particles to **NAS1638** cleanliness class **6-7**, ISO4406 **18/16/13**. The **T051** and **H051** filter elements are designed for oil treatment in robotic systems and low volume oil systems.

Type		H051	T051
Material		Cellulose	Cellulose
Diameter	mm	70	70
High	mm	85	85
Fineness of filtration	µm (absolute)	≥ 3	≥ 5
Flow rate	l/min.	0,2	0,2
Filtration capacity	NAS	4-5	6-7
β ratio	β 3µm	> 350	> 200
